5 Misc

5.1 Custom Vector

```
/* Description: Implementation of vector with negative indexing */
#include <bits/stdc++.h>
using namespace std;
template < class T>
```

```
struct MyVector {
   int offset;
   vector<T> vec_;
   MyVector(int n, int off, T &&values = T()) {
       vec_.resize(n, values);
       offset = off;
   T& operator[](int i) {
       i += offset;
       assert(0 <= i && i < (int)vec_.size());</pre>
       return vec [i]:
};
int main()
    ios_base::sync_with_stdio(false), cin.tie(0);
   // Example usage
   MyVector < MyVector < int > dp(10 + 1, 5, MyVector < int > (8 + 1, 4));
   for (int i = -5; i <= 5; i++) {
       for (int j = -4; j \le 4; j++) {
           dp[i][j] = i * j;
   }
   for (int i = -5; i <= 5; i++) {</pre>
       for (int j = -4; j \le 4; j++) {
           cout << i << " " << j << " " << dp[i][j] << "\n";
   }
   return 0:
```

6 Notes

6.1 Notes

```
/*
---
Pick's theorem:

If a polygon has all integer coordinates then the area A is
A = i + b / 2 - 1

where i is the number of integer points interior to the polygon
b is the number of integer points on the boundary
---
Shoelace formula:
1/2 * (x1*y2 - x2*y1 + x2*y3 - x3*y2 + ... + xn*y1 - x1*yn)
---
Euler's formula:
```

```
For a connected planar graph with v vertices, e edges and f faces (including
    outer)
v - e + f = 2
*/
// Mo's sorting order
bool cmp(Query A, Query B)
{
    if (A.1 / S != B.1 / S) return A.1 / S < B.1 / S;
    return A.r > B.r
}
```

7 Strings

7.1 Bitset Trie

```
